

OBLAK

A DOOR AND WINDOW COMPANY

ABOUT US

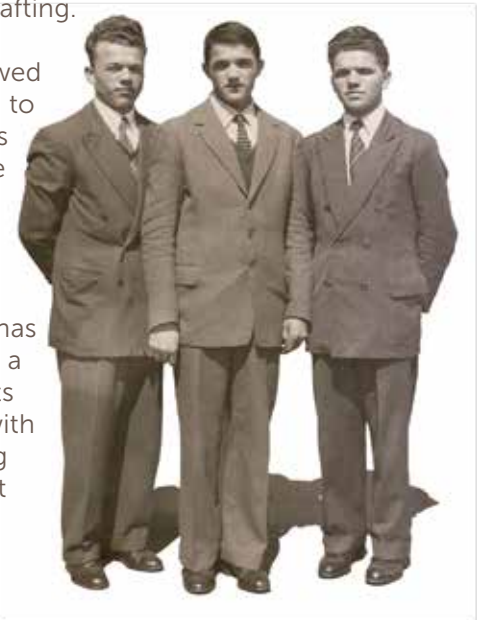

With a vision for the future and with high quality and technology standards, Oblak is a leading company in Argentina which offers a whole and innovative system of doors and windows over more than 50 years.

OUR LEGACY

Oblak company is a family affair. Our history began in 1950 with three remarkable brothers who set their initial industry on the outskirts of Buenos Aires. They emigrated from Slovenia, a country situated in the heart of Europe, and decided to start manufacturing wooden doors and windows taking advantage of their solid knowledge of the raw material and their skills at woodworking and handcrafting.

This decision quickly showed good results. They started to offer high quality products and their work formed the foundation of a solid and steady growing company that we know today.

That initial small industry has turned over the years into a leading company where its products are developed with the highest manufacturing standards and are the best of the local industry.

OUR MISSION – WHAT WE DO

Our daily work is focused upon developing and manufacturing the most complete and innovative set of products. This is the essence of our company and is reflected in our wide range of products.

We are highly committed to satisfying market demands, actively seeking our client satisfaction.

MAKING THE DIFFERENCE – HOW WE DO IT

We aim to bring differentiated, high-quality products using the latest technology and excellent materials with our professional and technical know-how and talented people.

OUR HEADQUARTERS

We have the capacity to manufacture more than 500,000 units per year with more than 300 employees. Our headquarters is in the province of Buenos Aires, Argentina and is surrounded by a land of 44 acres where the factory occupies 452.084 ft².

Each of our manufacturing process is carried out in compliance with environmental laws. Factory machines operate under European standards and all the wood we use comes from forest plantations.

OUR PRODUCTS

Our products are delivered from our headquarters through a wide distribution network; and they can be purchased throughout Argentina and in several countries of the continent.

OUR COMMITMENT

More than 50 years since we began, we remain just as committed to and passionate about advanced products that offer quality and satisfaction to our clients.

Every day we are challenged, and innovation has always been an inspiration to us all. We are proud of our history and therefore committed to continue offering products with the highest standards of manufacturing.

SUSTAINABILITY

OBLAK is committed to more sustainable business practices and environmental stewardship. This affects every aspect of our organisation and governs our approach to energy efficiency, air and water emissions and indoor air quality.

OUR FLAT JAMB

We offer the traditional flat jamb that comes in two pieces.

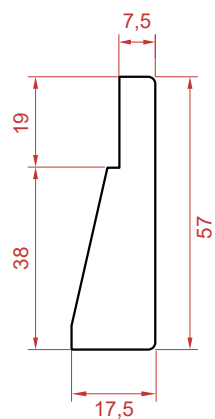

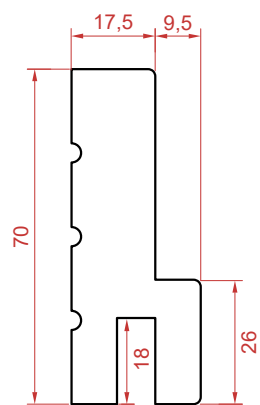

These pieces overlap slightly to adjust the flat jamb to wall thickness.

The kit of flat jamb is made of raw finger-joint clear pine.

There are three finishing available:

- Laminated in melamine foil.
- Primed white.
- Natural finger clear pine.

All of them fit with TEKSTURA, ROUTED MASTER and PRACTIKA Series doors.
